

# PROEasyLine

The new Professional Generation

# EASY-TO-USE, EFFICIENCY, LOW CONSUMPTION, VERSATILITY, RELIABILITY AND CONNECTIVITY: all this is the new PROEasyLine, the new Professional SMART generation

## WASHER PELW

PELW 65 with 6Kg capacity and PELW 80 with 8Kg capacity models are available with electric heating and with valve or pump drain system. 1400 rpm.

New full AISI 304 stainless steel design, the washer has been tested at 30.000 washing cycles: materials and quality of components make it reliable and durable. It is equipped with new color and multilingual programming display with capacity for up to 50 programs fully modifiable in the working parameters. Specific sanitizing programs at 90°C, 60°C and 40° C and washing programs for MOP and fringes are included. Programs can be loaded and updated via wi-fi.

The PROEasyLine washing machine is equipped with automatic laundry weight system. Based on information that is captured by sensors, the washing machine will adopt the programs to the actual amount of laundry in the drum and gives input to external auto dosing system in order to optimize detergent dosing, water and energy consumption. It also allows silent and quiet operation of the machine and prolongs the life-time of the appliance.

The balance and the redistribution of the load in the drum is operated by a 3D sensor: guarantee of success of every phase of washing, in particular of the spin. Less unbalance reduces the wear at the ball bearings and dampers, for increased lifetime of the machine.

It is available complete with peristaltic pumps and a new external system control unit adopted for intelligent external auto dosing systems. Available with mechanical or electronic coin box for self service operating.

## DRYER PELD

PELD 65 with 6Kg capacity and PELD 80 with 8Kg capacity models are available with electric or heat pump heating and with external drain or condenser.

Full AISI 304 stainless steel design, the dryer has a new full steel front exterior design. The new door, equipped with a big filter easy to open and easy to clean, has been subjected to a rigorous long term test to verify the opening and closing system and the resistance to breakage even in case of incorrect cleaning. The brushless motor ensures longer life and lower noise levels.

It is equipped with new color and multilingual programming display with capacity for up to 30 programs which can be loaded via wi-fi. The drum rotating system "Butterfly Drying™" assures the fabrics gentle care during drying operation. Two extra drum support rollers ensures greater stability even in heavy and badly distributed loads.

The heat pump model can be installed in small spaces, without external exhaust and poorly ventilated. The mesh filter mounted in heat pump model is easy to clean and catches slightly smaller particles .

Available with mechanical or electronic coin box for self service operating.

# VERSATILITY and CONNECTIVITY

PROEasyLine is designed for those small businesses that need professional laundry solutions, much stronger and performing than domestic machines. It is ideal for small restaurants, camping sites, beauty salons, wellness spa, hairdressers, barber shops and other medium-small professional activities. PROEasyLine is available in self service use for shared used in apartment buildings, residences, colleges and boarding schools.

## CONNECTIVITY

The PROEasyLine line is available complete with wi-fi module for remote control of the machines. Through the dedicated App you can consult the operating data of the machines by accessing the statistics that allow you to measure their performance.

The wi-fi connection allows you to create the laundry rooms divided by customer to update and load the programs of washing and drying remotely.

Additional functions available are those dedicated to the end user such as payment management and booking machines in self-service conditions of use.

## WHY YOU SHOULD CHOOSE IT

PROEasyLine has been developed to last over time thanks to its structure in AISI 304 stainless steel and the use of professional components.

The total flexibility in the choice of washing and drying programs and the high performance ensure excellent results even in the presence of stains or difficult fabrics.

It is particularly recommended for those activities that in addition to washing must remove hair, dust or lint from the fabrics and for which the use of domestic washing machines and dryers leads to frequent breaks and poor levels of cleaning.

The high quality of the components ensures a longer machine life.

The high level of performance allows fast cycles, low consumption and results.

Compact and stackable  
are perfect for small environments.

AT THE HEART OF YOUR NEEDS
